Campus Clique

A Course Project Report

Submitted in the partial fulfillment of the completion of the course

25CAI302SC507- Human-Computer Interaction and Design

In I Year II Semester M.Tech- CSE

Submitted by

Zoha Tabassum	2503B05119
Saniya Tahseen	2503B05122

Under the supervision of the faculty

Mr. Bediga Sharan

Assistant Professor, SoCS&AI

Academic Year: ***2025–2026***

Department of Computer Science and Artificial Intelligence

SR University

Warangal, Telangana, India.

SR UNIVERSITY

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

CERTIFICATE

This is to certify that the **Human Computer Interface - Course Project** Report entitled **" Campus Clique"** is a record of bonafide work carried out by the student Zoha Tabassum, Saniya Tahseen bearing Roll No(s) 2503B05119, 2503B05122 during the academic year 2025-26 in partial fulfillment of the award of the degree of ***Masters of Technology*** in **Computer Science & Engineering** by the SR University, Anathasagar, Warangal.

Supervisor

Mr. Bediga Sharan
Asst. Professor
School of CS & AI
SR University
Ananthasagar, Warangal.

Head of the Department

Dr. CH.Sandeep
Ass. Professor and Head
School of CS & AI
SR University
Ananthasagar, Warangal.

ORGNAIZATION OF REPORT

ABSTRACT

CampusClique is a mobile application designed to improve the way college students discover, explore, and participate in campus events. In many institutions, event-related information is scattered across multiple platforms such as notice boards, messaging applications, and social media, which makes it difficult for students to stay informed. This often results in missed opportunities and reduced participation in academic, technical, and cultural activities. The purpose of this project is to design a centralized and user-friendly interface that brings all event information into a single platform.

The application is designed using Figma, focusing on creating an interactive and visually appealing prototype without the need for coding. The design process follows key Human-Computer Interaction (HCI) principles such as usability, accessibility, consistency, and user-centered design. Features such as event categorization, search functionality, personalized recommendations, and notifications are included to enhance the user experience.

CampusClique aims to simplify navigation and reduce the cognitive effort required for users to find relevant information. By organizing events in a structured and intuitive manner, the application ensures that users can easily browse, view details, and register for events. The design also focuses on accessibility by using readable fonts, appropriate color contrast, and simple layouts.

Overall, this project demonstrates how effective UI/UX design can address real-world problems and improve user engagement. CampusClique provides a practical solution for managing campus events and highlights the importance of applying HCI principles in designing modern digital applications.

Keywords: HCI, UI/UX Design, Figma, Event Discovery, Campus Events, Wireframing, Prototyping, Usability

1. Introduction

Human Computer Interaction (HCI) is an interdisciplinary field that integrates concepts from computer science, psychology, design, and cognitive science to develop interactive systems that are efficient, effective, and satisfying for users. The primary objective of HCI is to enhance the interaction between humans and computers by designing interfaces that are intuitive, accessible, and user-friendly.

In recent years, the rapid growth of digital technologies in the educational domain has significantly transformed the way students interact, communicate, and access information. Educational institutions increasingly rely on digital platforms for sharing information, organizing events, and fostering collaboration among students. However, many existing systems lack usability, consistency, and user-centered design, leading to poor user experience and reduced engagement.

The **Campus Clique** project is proposed as a solution to address these challenges by providing a centralized, interactive platform specifically designed for campus environments. The system focuses on improving communication, enhancing participation, and simplifying access to campus-related information through an intuitive user interface.

The platform enables users to:

- **Discover events:** Easily browse and stay updated with ongoing and upcoming campus activities
- **Connect with peers:** Build networks and interact with fellow students and organizations
- **Participate in activities:** Engage in academic, cultural, and extracurricular events
- **Stay informed:** Receive timely updates and notifications about campus happenings

The design of Campus Clique follows a user-centered approach, ensuring that the needs, preferences, and behaviors of users are carefully considered throughout the design process. By applying core HCI principles such as usability, accessibility, consistency, and feedback, the project aims to create a seamless and engaging user experience.

2. Problem Statement

Students often face difficulties in accessing campus event information due to the absence of a centralized platform. Event details are scattered across multiple sources such as social media, messaging apps, emails, and notice boards, making it difficult to stay updated.

The lack of proper organization and filtering leads to information overload, causing students to miss relevant events. Event organizers also struggle to effectively promote activities and reach a wider audience. Additionally, existing systems lack user-friendly interfaces and essential features like reminders and easy registration.

The specific problems we set out to solve were:

- Lack of a centralized platform for accessing campus event information
- Difficulty in discovering relevant events due to scattered and unorganized data
- Information overload and missed events caused by multiple communication sources
- Limited reach for organizers and poor user experience due to weak interface design and lack of essential features

Therefore, there is a need for a centralized and user-friendly platform that simplifies event discovery, improves accessibility, and enhances user experience using HCI principles.

3. Methodology / Procedure

The methodology followed for the **Campus Clique** project is based on a **User-Centered Design (UCD)** approach under Human-Computer Interaction principles. The complete procedure was divided into multiple phases to ensure that the interface solves real student problems effectively.

Step 1: Requirement Gathering

The first step involved identifying the major problems faced by students in accessing campus event information.

Activities Performed:

- Observed how students currently discover events
- Studied existing platforms such as WhatsApp groups, notice boards, and social media
- Identified pain points like:
    - scattered information
    - missed notifications
    - no central registration system
    - difficult navigation

This helped in understanding the **exact user needs**.

Step 2: User Research and Persona Creation

A small UX research process was followed by analyzing student behaviors and event organizer requirements.

Outputs:

- Busy student persona
- Event organizer persona
- Admin persona

These personas helped define:

- goals
- frustrations
- frequent actions
- expected features

This phase ensured **design decisions were based on real users**.

Step 3: Information Architecture

After research, the application flow was structured into meaningful sections.

Main Modules:

- Landing Page
- Login / Signup
- Dashboard
- Upcoming Events
- Past Events
- Saved Events
- Event Calendar
- Profile
- Notifications
- Ticket Booking

The screens were organized to reduce **cognitive load** and improve discoverability.

Step 4: Wireframing

Low-fidelity wireframes were created to define the basic screen layout.

Included:

- navigation bars
- card layouts
- buttons
- event sections
- filter bars
- form fields

Wireframes helped validate:

- screen hierarchy
- navigation flow
- content placement

before moving to final UI design.

Step 5: High-Fidelity UI Design

Using **Figma**, high-fidelity screens were designed with reusable components.

Design Principles Used:

- consistency

- accessibility
- color hierarchy
- visual feedback
- readability
- minimal user effort

The final design included:

- event cards
- filters
- personalized event suggestions
- booking interface
- profile management

Step 6: Prototyping

Interactive prototype links were created in Figma to simulate real app behavior.

Prototype Features:

- page navigation
- button interactions
- hover states
- smart animations
- micro-interactions
- transition effects

This helped test **realistic user flows**.

Step 7: Usability Evaluation

The final phase involved checking the design against usability principles.

Evaluated Using:

- visibility of system status
- consistency
- error prevention
- easy navigation
- accessibility
- recognition over recall

This ensured the final system was **simple, efficient, and user-friendly**.

4. Implementation:

The Implementation of Campus clique:

Wireframes

The wireframing phase allowed us to validate the information architecture before committing to the final UI styling. Since the project is now 100% complete, the wireframes translated directly into the final high-fidelity screens.

4.1 Landing Page

The landing page opens with a high-impact hero section. The top navigation provides immediate access to "Features" and a clear "Get Started" call-to-action. Below the fold, feature points are highlighted alongside placeholder cards for community testimonials, ensuring visitors understand the app's value within seconds.

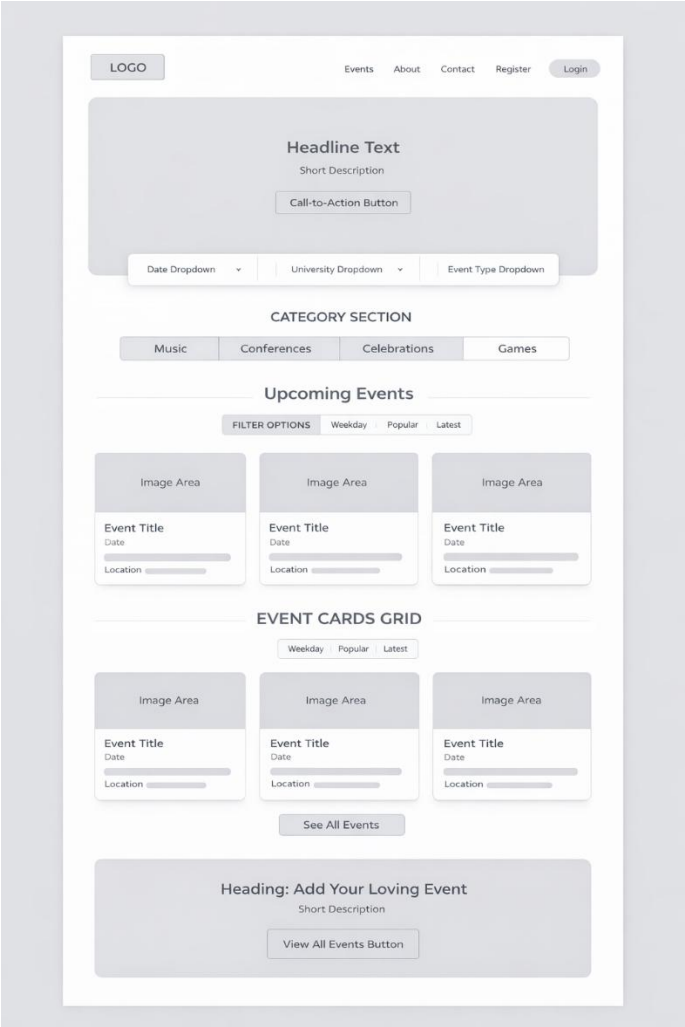

Figure 1 — Landing Page

4.2 Login / Signup Screen

A clean, central modal design utilizing the primary brand colors. It handles authentication and serves as the routing mechanism that identifies the user's role and directs them to the correct dashboard.

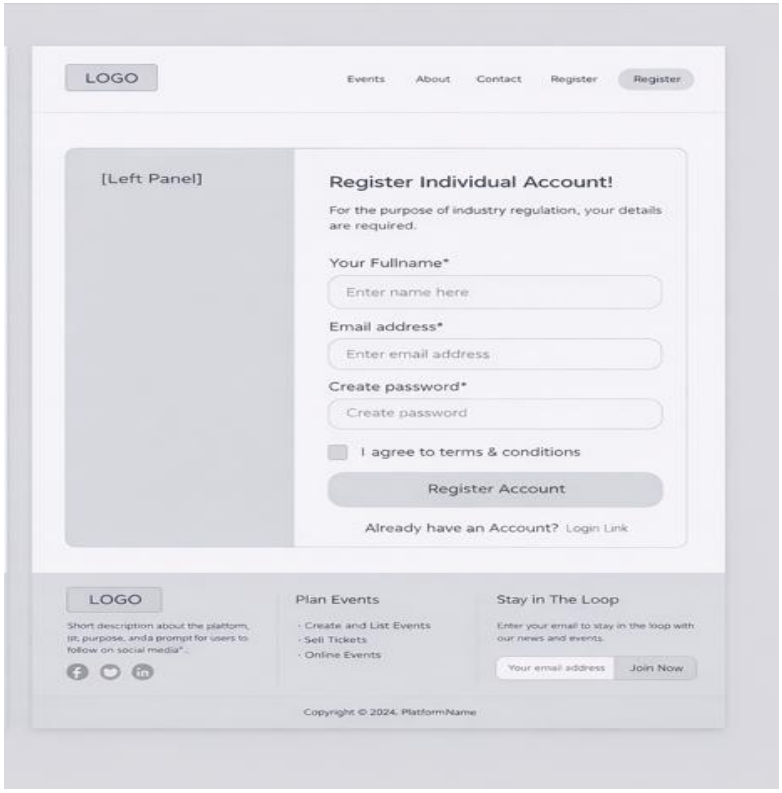

Figure 2 — Register Page

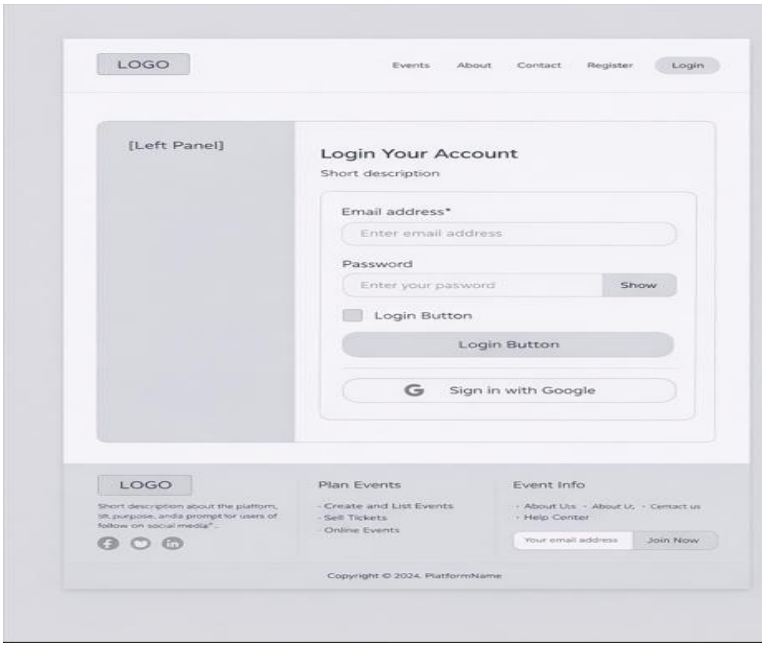

Figure 3 — Login Page

4.3 Event History Module

The Event History screen presents a record of all events attended or registered by the user.

- A sidebar navigation panel enables quick switching between different dashboard sections.
- Events are displayed using a structured card-based layout to support easy scanning.
- Each card includes essential details such as event title and brief information.
- A “Load More” option allows progressive content loading for improved performance and usability.

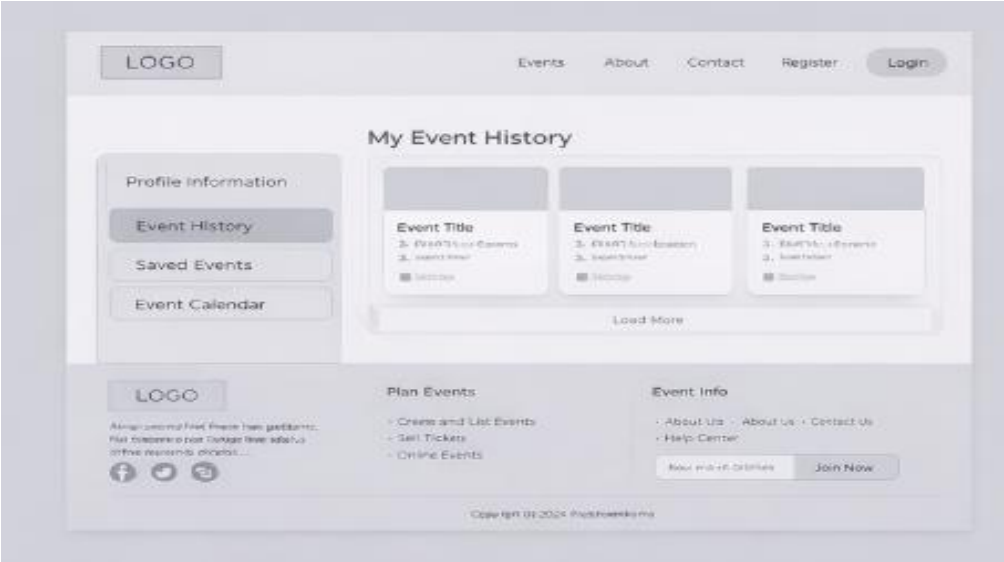

Figure 4 — Resident Dashboard

4.4 User Profile Management

My Profile screen is designed for managing user information in a clear and structured manner.

- Includes form fields for personal details such as username, email, university, and password.
- Provides an option to update and save changes efficiently.
- Uses a clean layout to enhance readability and ease of interaction.

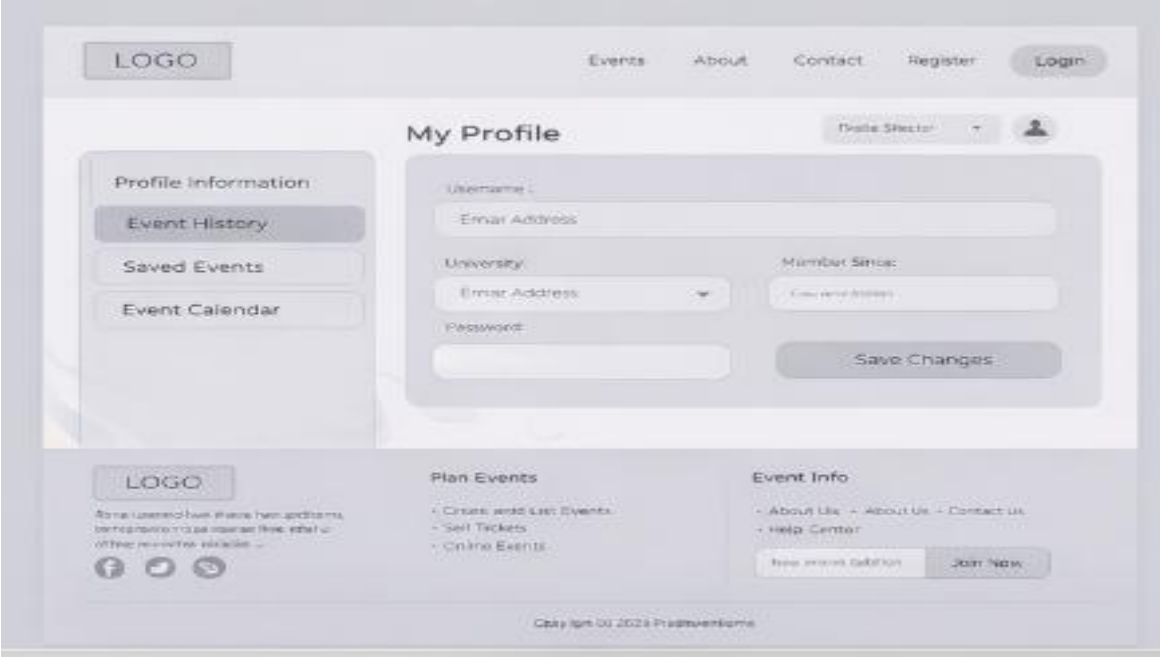

Figure 5 — Supervisor Dashboard

The User Profile Management component enables users to manage and maintain their personal information efficiently within the system.

- **Profile Information:**

  Includes essential fields such as username, email address, university, and password, allowing users to keep their details up to date.

- **Edit and Update Functionality:**

  Users can easily modify their information and save changes through a dedicated update option, ensuring a smooth and efficient process.

- **Form Validation:**

  Input fields are designed to ensure correct data entry, improving accuracy and preventing errors.

- **User-Friendly Layout:**

  The interface follows a clean and structured design with proper spacing and alignment, enhancing readability and ease of interaction.

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>Campus Clique</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      background: #f5f5f5;
      margin: 0;
      padding: 20px;
    }

    .event-card {
      width: 300px;
      background: white;
      border-radius: 12px;
      padding: 15px;
      box-shadow: 0 4px 10px rgba(0,0,0,0.1);
      margin: 20px auto;
    }

    .event-card img {
      width: 100%;
```

```
    border-radius: 10px;
}

.event-title {
    font-size: 20px;
    font-weight: bold;
    margin-top: 10px;
}

.event-date {
    color: #3B82F6;
    margin: 8px 0;
}

.btn {
    background: #FF4D8D;
    color: white;
    padding: 10px 15px;
    border: none;
    border-radius: 8px;
    cursor: pointer;
}

.btn:hover {
```

```
            opacity: 0.9;
        }
    </style>
</head>
<body>

<div class="event-card">
    <img src="event.jpg" alt="Event Image">
    <div class="event-title">Tech Fest 2026</div>
    <div class="event-date">10 April 2026</div>
    <p>Join the biggest technical event on campus.</p>
    <button class="btn" onclick="registerEvent()">Register</button>
</div>

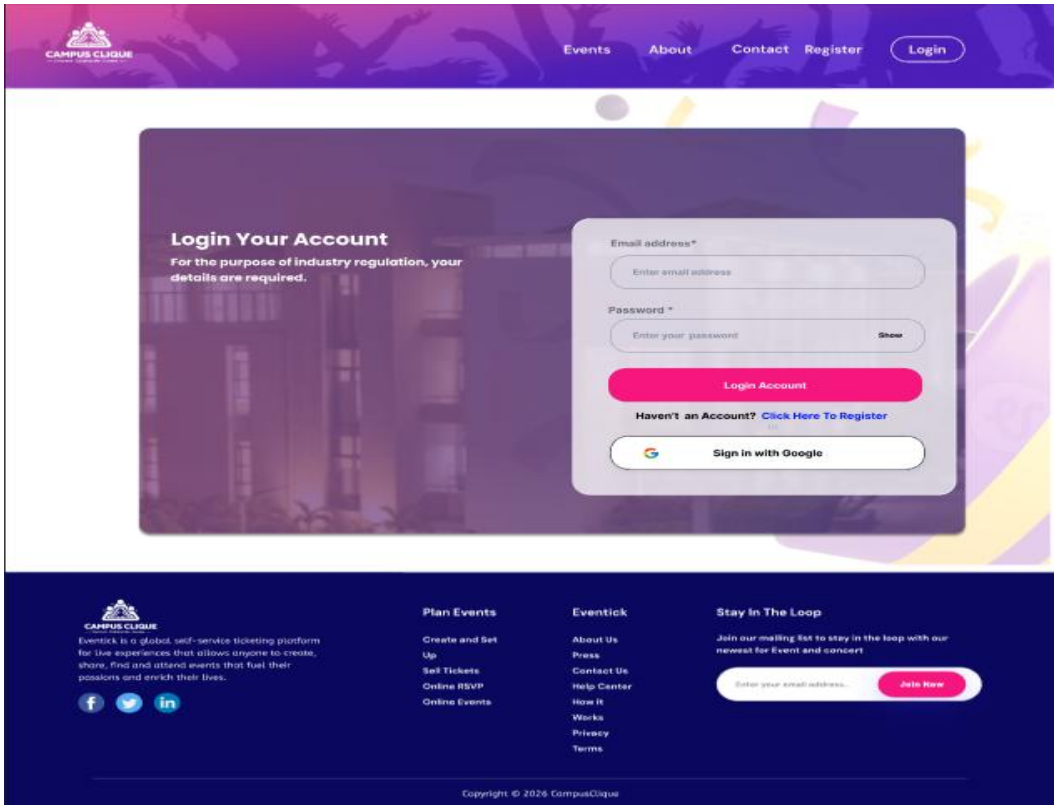
<script>
function registerEvent() {
    alert("Successfully Registered!");
}
</script>

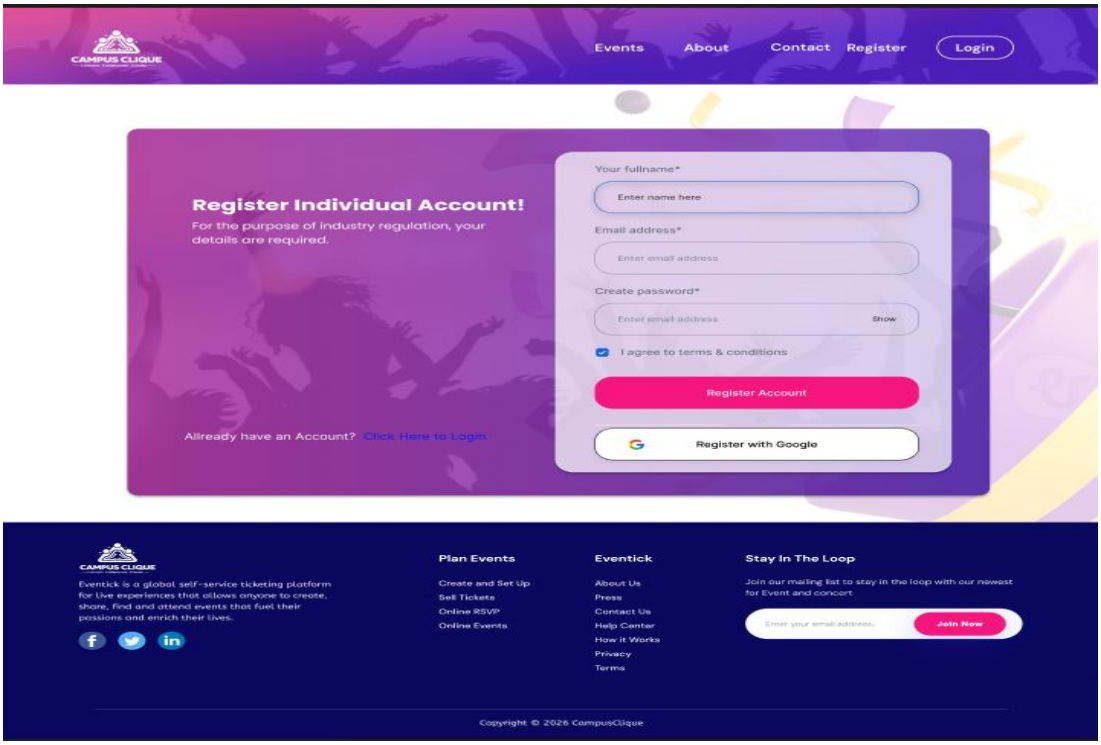
</body>
</html>
```

5. Output Screens:

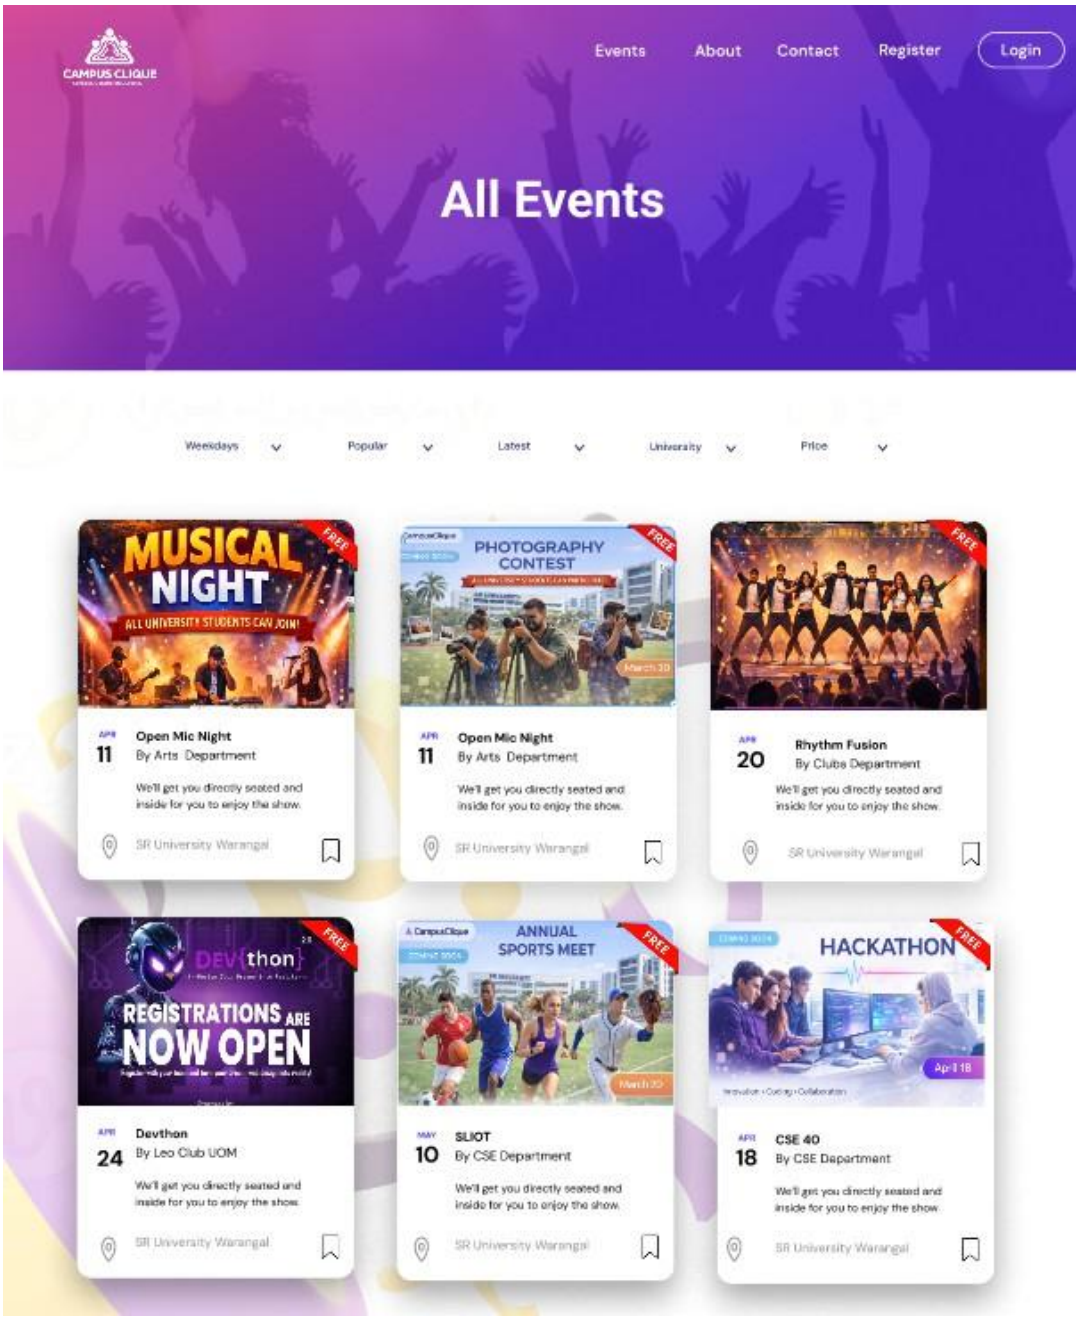
- **Landing Page:** The introductory hero screen outlining the core value proposition.

- **Login Dashboard:** The central authentication portal that logically routes users to their respective role-based dashboards.

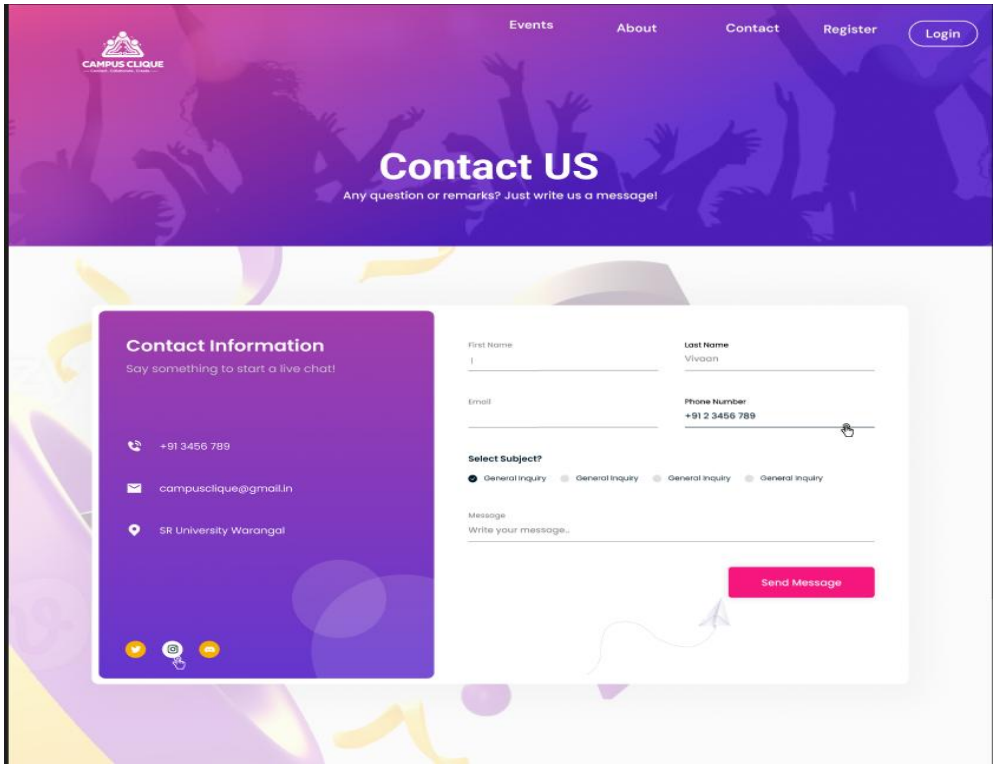




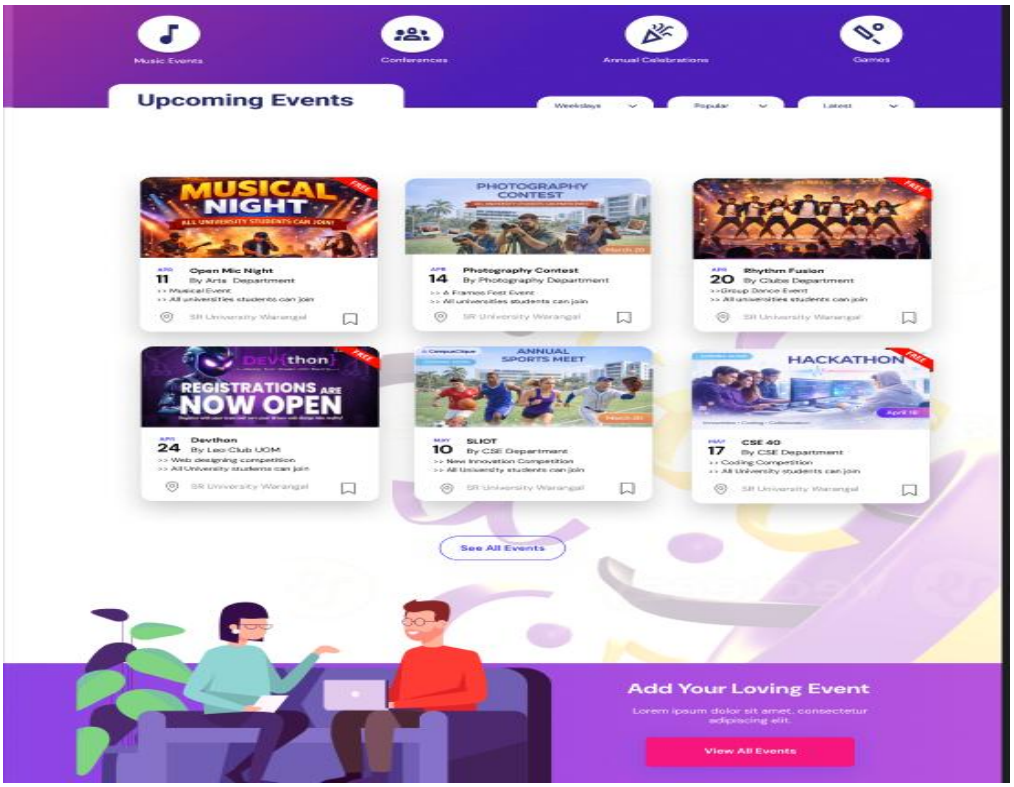
5.2 Event Categories Section: The primary interface for residents, featuring a prominent "Report Issue" action and quick-glance status cards.



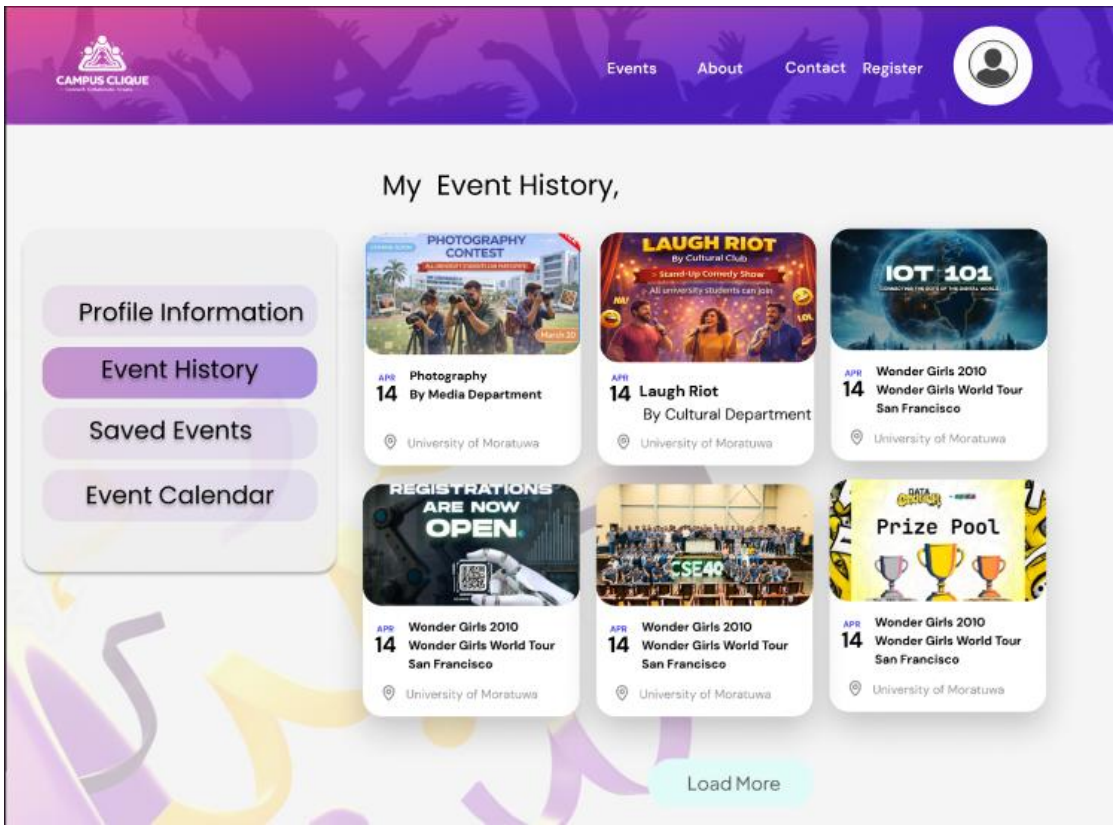
5.3 Contact Us Page Interface



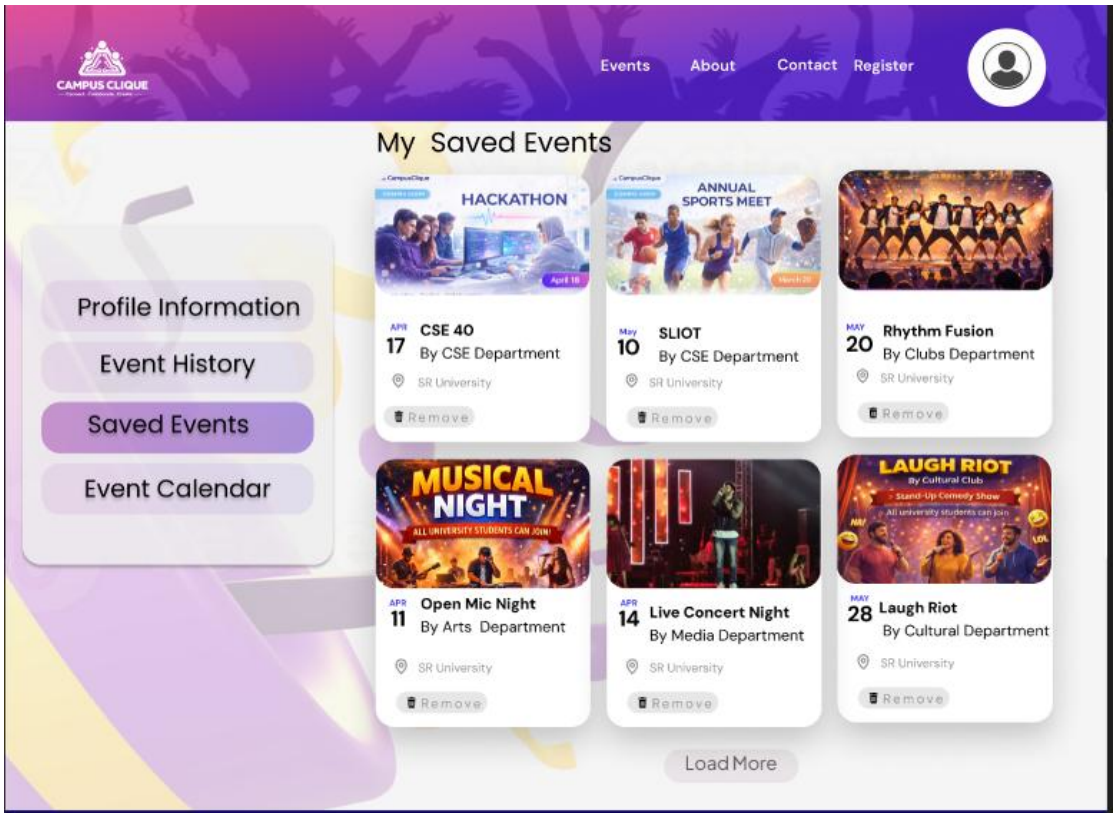
5.4 Upcoming Events Section



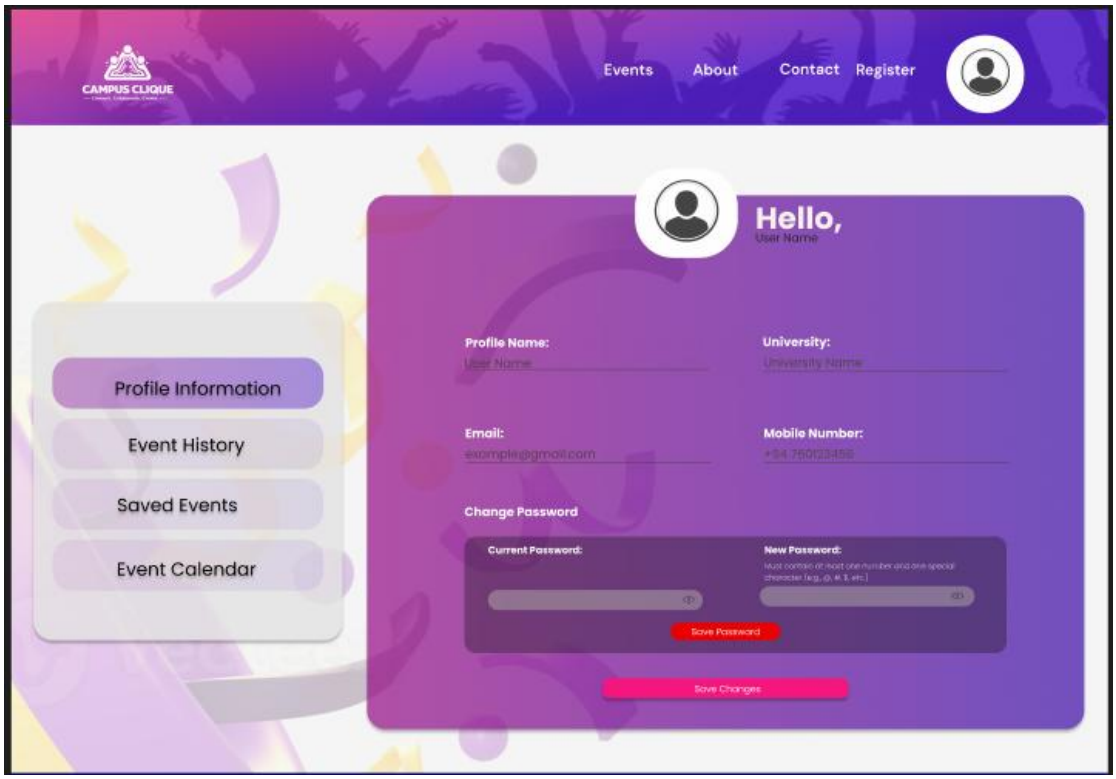
5.5 Past Events Overview



5.6 Saved Events Module



5.7 Monthly Event Planner



5.8 My Profile Dash
